## RESEARCH INTERESTS

**Understanding composition and state of matter inside neutron stars (NSs).** Measuring mass, radius, spin frequency, and moment of inertia via pulsar timing. Modelling gravitational waves (GWs) from systems involving NSs: tidal/spin effects in inspiralling binary NS systems, oscillating NSs, and "mountains" on NSs. Studying dynamics of freely precessing magnetars and searching for free precession from timing and polarization of radio signals.

**Probing strong-field gravity with pulsar timing and GWs.** Constructing timing model and testing gravity with pulsar timing. Analyzing timing data and doing parameter estimation. Calculating global properties of NSs and modelling GW waveform in alternative theories of gravity.
